

Forensics

Learn modern techniques for forensic investigation through virtual lessons and in-depth analyses.

While working through our Forensics lessons, students will gain core competencies in cutting-edge skills such as crime-scene sketching, latent print detection, and spot-testing for explosive residues. They will use in-depth analyses of glass, hair, fibers, and soils to learn modern techniques as they engage in exciting investigations to determine how trace evidence is transferred between suspects, victims, and crime scenes.

Standard Kit Lessons – SI-10113-FS-01

Introduction to Microscopy – Forensics	Trace Evidence
Documenting Crime Scenes and Evidence	Firearms
Impression Evidence	Questioned Documents
Fiber and Hair	Forensic Anthropology
Fingerprinting	Autopsy
Blood Analysis	Fractography and Glass

Additional Lessons

DNA	Fire Investigation and Explosives
Toxicology	Analysis of Soil

Redefining Online Lab Science
