

# Geology

Gain hands-on experience with a wide-range of geology topics such as rock formation, weathering, etc.

Using our robust library of Geology lessons, students will gain hands-on experience investigating a wide range of topics, including rock formation, weathering, plate tectonics, and hydrology. Students will also develop the skills to classify, identify, and describe rock and mineral samples.

## Standard Kit Lessons - LP-2654-GK-01

|  |                             |
|--|-----------------------------|
| Streams and Groundwater                        | Igneous Rock Identification |
| Reading and Interpreting Contour Lines         | Field Investigation Project |
| Introduction to Topographic Maps               | Plate Tectonics             |
| Weathering and Sedimentary Rock Identification | Earthquakes and Volcanoes   |
| Metamorphic Rock Identification                | Crystal Formation           |

## Additional Lessons

|                                  |                               |
|----------------------------------|-------------------------------|
| Radioactive Decay                | Mineralogy and Identification |
| Introduction to the Solar System |                               |
